We strive to guarantee our customer's satisfaction and the reliability of systems we deliver to them

Background

Visualsoft® is a multi-national software house with a branch nearby your location. Our products span a very wide variety of applications that we initially build for our customers as per their needs and in view of our philosophy outlined below. Among these applications are the following:

- Highly sophisticated, but user friendly, accounting packages.
- Comprehensive plant maintenance and inspection management systems that can meet almost all industrial needs and requirements.
- Inventory tracking and management databases that can be customized and tailored to almost any specific needs.
- Library and documentation record keeping packages that meet the most advanced indexing specifications and that seamlessly integrate with the most advanced object-oriented software and hardware environments.
- High-tech biometric applications where human fingertips can be used to identify for security, with absolute precision, human being interface with surrounding automated systems.
- Vibrant and highly dynamic web solutions.

Visualsoft® is in full integration with experts and highly qualified consultants. These highly capable consultants can, and do, effectively provide the best advice and guidance for developing databases and records management systems that can meet almost any industrial and/or commercial needs.

And what is more important: *Visualsoft®* is very nearby and always closer to you than any body else. Of course, this always translates to much better technical support, much less spending, and maximum capacity for meeting your specific needs and requirements with minimum effort and in the shortest time possible.

With this brief background, which we bring to you with full confidence, we feel pleased to offer you the service of developing systems that can make your life much easier, much safer, and much more productive.

Our Philosophy

Having a ready developed package that needs further customization to a customer's need is NOT our policy. That is simply because we care much about our valued customers and, therefore, we do not overload them with extra work and cost they do not need.

Rather, we start with them from a blank sheet of paper and define with them all of their needs and then build for them a superior system that makes them always proud of us and of themselves as well.

As we did with our different customers (like SABIC, Al-Ghamdi, AYTB, . . .), we will first sit with you, listen to you, and then analyze your needs and get back to you very shortly with a skeleton of the system design you need.

Upon further discussions with you and with the help of our highly experienced consultants, we fine-tune the design and commence the heavy work.

The philosophy behind this is the fact that every customer, would definitely have different problems and requirements. Therefore, it is you, the user, who will be fully sure about what data you will need to deal with. However, as stated above, *Visualsoft®* is fully capable to integrate all components for you.

All the above will not be done with the ancient DOS-based mentality like some other competitors do.

Rather, *Visualsoft®* always employs the most advanced and up to the minute object-oriented, user-friendly, COM+, DCOM, .NET technologies and powerful database such as Oracle and SQL-Server.

Software Engineering & Methodologies

Our software engineering Methodologies include step-by-step processes for both object oriented (iterative and recursive) and traditional water-fall & spiral development approaches. Client server and legacy migration are also covered under systematic development. Structured methodologies include detailed planning, synchronizing resources (both human & time) with phased deliveries, matching design and code deliveries of dependent modular pieces with final integration, efficient source code control & configuration, parallel testing and final integration, client acceptance testing. Many of these tasks are achieved through the use of CASE tools, project management tools, source code control & configuration software packages, automatic testing tools, and detailed planning. Our structured software engineering practices offer the distinct advantages of managing:

- Business issues
- Better process
- Support for reuse
- Quality focus
- Extensions and modifications projects
- Flexible architecture
- Integrated metrics support

Management of complexity

Our Clients

A representative slice of our past and present clients are given below for reference. More details about some or all of these clients can be provided upon request.

Company	Project
SULTAN BIN ABDULAZIZ SCIENCE AND TECHNOLOGY CENTER	The Launching & Deployment of the Exhibits & Software controlling System
SABIC-TSMS (SHARQ)	Technical Study Management System
SABIC-MCS (SABCI R&D)	Material & Corrosion Management System (MCS)
SABIC-P&EM	SABIC Standards & Technical Documentation Management System (STDMS)
SAUDI Ericsson	Database Integration Module with SeC System (DBIM)
AL-Kadi Factory	ERP System
NABA International	ERP System
AYTB	Human Recourse System
Arabian Alkali Company (SODA)	Procurement System
AK & Partners	Steel Stock & Cutting System / Inventory System
Ali H. AL-Gamdi	Financial accounts and Human resource
Al-Mulhim for Car Distributors	Installment Management System
AYTB-Holding Company.	Complete solution study with system DFD
SABIC-Recruitment	Recruitment Management System
Ticket Computers	Integrated system (Purchasing , Sales, Accounts, Inquires ...ETC)
Other projects	HIT, Abdullah AL-Gamdi EST, AL-Shamrani (5 Branches)..ETC

Visualsoft Identity

Visualsoft® was founded on the principle and dedication to the advancement of technology and innovation through:

- Focus on Internet/Web/E-commerce/Java/ASP/.NET related design and development.
- Development on Windows95-98/NT/2000/XP, UNIX platforms.
- Web design, development, maintenance and testing.
- Software maintenance including migration from legacy systems.
- Object Oriented Software development and support.
- Full cycle Software Testing.
- On-site development & support.

The fundamentals, on which our services and products are delivered, always emphasize on:

- The best quality without compromising anything;
- The unbroken reliability of being everywhere, whenever needed;
- The minimum cost for achievement of maximum competitive advantage.

Internally we value mostly:

- Our people.
- Innovation and Creativity.
- Customer satisfaction.
- Sincerity and Honesty

Visualsoft Professional Staff

In addition to our highly dependable, partial-time consultants, some of our fully dedicated staff are listed here:

Name	Position	Qualification & Experience
Nabil Al Khatib	Consultant	30 years of experience in financial budgeting (AOC and ARAMCO)
Dr. Hussein Al-Armouti , Ph. D in computer science	Consultant	20 years in software development
Abdullah Habbabeh	Consultant	10 years in software development
Abdullah Al Khatib	Project Manager	7 years in software development
Shadi Hammad	Sr. Programmer	Computer science
Amjad Massod	Sr. Programmer	4 years in software development
Ehsan F. Hamideh	SR. Programmer	Computer science
Mohammed Rizwan	System Analyst & Designer	4 years in software development
Moahmmed Omar	Programmer	Computer science
Yousef Hammad	Customer care
